Art Unit: 1755

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3 and 6, drawn to a panel, classified in class 52, subclass 100+.
- II. Claims 4-5, drawn to a cement composition, classified in class 106, subclass 713+.
- III. Claims 7-8, drawn to a process of making a panel by molding, classified in class 264, subclass 333+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product (cement composition) is deemed to be useful as a coating, building tile, block, (not just panel), walkway, reinforcing agent in subterranean formation, etc. and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the

Art Unit: 1755

process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the panel can be made by other molding methods such as pouring and casting, injection molding, extrusion, etc..

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different operations, functions, and effects and are patentably distinct as shown by their mutually exclusive characteristics. Also, the cement need not be used to make a panel but can be used for a coating, building tile, block, (not just panel), walkway, reinforcing agent in subterranean formation, etc.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different search and classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Corwin Umbach on 8/24/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul Marcantoni whose telephone number is 571-272-1373.
